dental laser

DEALER

## Easy to use

**Endodontics:** laser energy, added to root canal procedures, presents a great list of advantages. It reduces the quantity of microorganisms in canal. It removes the smear layer made of organisms and tooth substance and subsequently melts and resolidifies the dentin to close the tubular openings.

## Practical employ

**Periodontics:** a very effective bactericidal instruments, laser assists scaling and root planning by reducing pockets and restores the tissue to top health. The thin laser fibre allow to operate with minimal pain inside the pockets.

## Several accessories

**Surgery:** in most of the cases laser operations can be performed without anesthesia with minimal bleeding and with quicker post-op recovery. Furthermore this not invasive method does not always need stitches.

## Training support

**Therapy:** lasers can also be usefully employed in the healing of several other diseases such as herpes, aphthae, TMJ therapy, as well as in the biostimulation and analgesic therapy.

## Workstation

**Whitening:** laser removes stains and yellowing effectively and restores the natural white teeth colour. Thanks to the special handpieces (wide and small area) operations become quick and accurate.

## Wide range of accessories:

Doctor smile D5 is supplied with a complete set of accessories, which make it suitable for several dental purposes: from the handpiece specific for Endodontics, Periodontics and Surgery to the ones for small and wide area whitening.
